

Backup and Recovery Summary

SIMULATED / FICTIONAL EVIDENCE — FOR EDUCATIONAL USE ONLY

Organization	CloudFlow Technologies (fictional SaaS vendor)
Product in scope	CloudFlow CRM
Classification	Confidential — Internal Use / Simulated Evidence
Approval status	Approved for simulation (not a live corporate record)
Document owner	Jordan Hale, Chief Information Security Officer
Document ID	OPS-BU-003
Version	1.3
Effective date	01 July 2025
Last restoration test	12 November 2025

1. Backup cadence

Production database snapshots are taken daily. Object-storage versioning is enabled. Snapshots are encrypted with AWS KMS and replicated to a separate AWS account in us-east-2.

2. Retention

Operational snapshots: 30 days. Archive copies: 12 months. Access is limited to the backup administrator role, reviewed quarterly.

3. Restoration testing

Restoration testing is performed annually. The 12 November 2025 test restored a non-production snapshot to an isolated account. Recorded recovery timing was 6 hours and 40 minutes, within the 8-hour RTO, but the dataset was not a full production-scale tenant set. Timing against an RPO cannot be fully evidenced because RPO is not formally documented. Quarterly restoration testing is not currently performed.

4. Recovery limitations

- Point-in-time recovery finer than the daily snapshot is not generally offered to customers.
- Regional failover is runbook-based and was not fully exercised in 2025.
- Customer-managed key restore scenarios are not applicable (CMK not generally available).
