

Business Continuity Plan

SIMULATED / FICTIONAL EVIDENCE — FOR EDUCATIONAL USE ONLY

Organization	CloudFlow Technologies (fictional SaaS vendor)
Product in scope	CloudFlow CRM
Classification	Confidential — Internal Use / Simulated Evidence
Approval status	Approved for simulation (not a live corporate record)
Document owner	Jordan Hale, Chief Information Security Officer
Document ID	BCP-001
Version	1.9
Effective date	01 September 2024
Last review date	15 January 2026
Last tabletop	04 December 2025

1. Critical services

CloudFlow CRM production application, primary PostgreSQL-compatible data store, authentication service, and customer notification email pipeline are Tier-1. Analytics pipelines are Tier-2.

2. Recovery objectives

The approved Recovery Time Objective (RTO) for the production CRM application tier is eight (8) hours. A Recovery Point Objective (RPO) is not formally documented or approved in this plan. Daily backups currently provide a de facto recovery point of approximately 24 hours. Technology and business owners have not signed an RPO statement. This is an intentional disclosure for the simulated assessment.

3. Business continuity

Workforce continuity uses corporate SaaS productivity tools and a documented crisis communications roster. Customer Success maintains a status page process for availability events.

4. Disaster recovery

Production is deployed multi-AZ in AWS us-east-1. Backups replicate to a separate AWS account in us-east-2. A regional impairment runbook exists. A full regional failover exercise was not completed in calendar year 2025. The BCP is exercised via annual tabletop and annual technical restore.

5. Dependencies

Critical subprocessors include Amazon Web Services. Email delivery and selected analytics utilities are listed in the subprocessor inventory. Continuity of those parties is addressed contractually but not through a fully scored residual-risk process (see Subprocessor Management Summary).
